

**Team:** Team 3

**Inject Number:** 13

**Inject Duration:** 75 Minutes

**Inject Start Date/Time:** Fri, 23 Mar 2018 18:57:49 -0500

**From:** IT Director

**To:** Infrastructure Team

**Subject:** [B-107] FW Policy and Configuration

Develop FW policies that utilize the application layer policy elements rather than purely layer-4 transport port information. Develop a memo that documents these policies in a tabular format that shows expected allow services (inbound or outbound) by host. Supply a screen shot to validate that these policies have been implemented. Enable the threat protection service and implement this protection on your policies. Enable the wildfire remote detonation service for inbound files/attachments. Show all of this in the screen shot documentation.

Thank you.

*IT Director*
