**Subject:** [O-225] Validate remediation of EternalBlue SMB Vulnerability

One of our partners is reporting active infections of the Petya ransomware which utilizes the EternalBlue Vulnerability (CVE-2017-0144). Provide in memorandum format a detailed analysis of our asset inventory and whether it is 1) a potential target of the vulnerability and, 2) That it is successfully patched for the vulnerability - provide evidence in the form of patch version or screen capture for each device that is a potential target.

Thank you.
