Subject: [B-110] Implement System Login Banners

We need to make sure we are implementing login banners on all administrative interfaces. These banners should be consistent on all of our devices and should clearly define acceptable use. It should serve as a deterrent and provide us legal protection in the event of an incident.

Step 1: Ensure all systems have implemented a consistent login banner that fulfills our organizations security requirements.

Follow the NIST 800-53 Control AC-8 for composing your login banner. We need to be compliant with this standard.

Step 2. Submit a well written business memo to the IT director containing the text content of the login banner implemented and include a snippet or screen shot for each system showing the banner has been implemented. Please make sure to send screenshots for each device so that the banners can be verified.

Thank you.
