From: IT Director

To: Infrastructure Support Group

Subject: Network Traffic Baseline

The IT Director requires a document that contains a table of every machine in the company and the average network traffic. This will help determine a network baseline and understand the amount of bandwidth the business needs to function.

Provide a table of every machine and the amount of traffic (in bits) it is transmitting and receiving. Use Palo Alto, Splunk, native system tools, or a combination to gather this information.

Develop a memo that catalogs the traffic statistics, and specifically what tool(s) did you use to develop this information. Show screen shots illustrating tool's output that you used.

Thank you.

IT Director
