Subject: 3.4.2|3.13.4 Create/Validate Essential DNS Records for Mail Delivery and Spam Protection

Create the essential DNS Records for Mail Delivery and Spam Protection within our DNS server to ensure safe and effective mail delivery. This at a minimum should include MX, SPF, and DKIM records on our DNS server. In a memo, describe the DNS records you are creating. Implement them in our DNS and demonstrate that they are correct with the "dig" command on the linux system of your choice. Include the output of your "dig" DNS queries for the domain MX, SPF, and DKIM records.

Thank you.

IT Director
