Subject: Inventory and Local FW Configuration

Create a memo that lists all the servers that are in your topology and the expected services that should be running on them. Think about these services in the context of those that should be available from the local (internal) network vs those that should be available to the external network.

Develop local (software) FW policies on each to filter both inbound and outbound traffic to match these expected services.

Include screen shots in the memo that validate the set up of FW policies for each server.

Thank you.

IT Director
