Subject: [B-100] Asset Inventory

As part of our compliance requirements, we need to have an inventory of all the devices on the network together with their open ports and expected services. Please develop a memo that we can pass along to the internal auditors. You will need to use a tool such as NMAP to document the open ports. The memo should create a table that has the following columns:

System Name
Purpose(s)
O/S and Version (Windows, Linux, Solaris etc..)
IP Address(es)
Critcal Application(s)
List of Services Running
List of Open Ports

After upload you should keep a working copy of the file and note any changes to existing configurations. We will be audited in the future on short notice so it is best we are prepared.

We may need to use this report in the future to document changes.

Thank you.

CIO Management Team
