Subject: 3.13.2 Endpoint Protection Software Installation

Ensure that appropriate Endpoint Protection Software is installed and running on all systems.

NOTE: For clarification, this can be trial downloads or full product installations of any endpoint protection software product for this competition.

REQUIREMENT: Please provide screen shots of the software installation or the software running for each of the systems. The Main Firewall will NOT be required for this inject a it should have its own protection already enabled. Scoring will be directly effected if proof of installation is not shown for each of and all of your systems. Teams are free to pick their own end-point protection solution

i.e. example: Sophos home endpoint protection could be registered with an email and trial downloaded that works on both OS platforms windows and Linux based. from url: https://www.sophos.com/en-us/products/free-tools.aspx. ClamAV is another candidate.

Thank you.
