Subject: H131 - Rogue DHCP Server

An organization in our building experienced a LAN outage from a disgruntled employee caused by a rogue DHCP server giving out invalid MAC addresses. It took their support staff a number of hours to determine this was the problem and track the rogue server down. We have been advised that our Cisco switches have protections for this.

Configure this protection on our 2960, advise if we need any IOS upgrades to do this. Reply with a business memo documenting the exact configuration elements and assessment.

Thank you.

IT Director
