Subject: [B-103] External Vulnerability Scan

Us a machine on the Public Segment to scan your external address range. Develop a memo that documents:

1.) What tool or tools did you use and show screen shots of it working.
2.) Create a table that documents the available ports by IP address
3.) Add to the table known vulnerabilities (discovered by the tool) for each IP address/port number entry.

Partial scoring points are provided for the available ports. Full points for adding the vulnerabilities.

Thank you.

IT Director
