Subject: S160 - URL Blocking

Our company is pretty generous with our internet usage policies, however, the CFO has noticed that employees at the office spending a little too much time on sites that obviously have no connection to the day to day operations of our organization. The CFO made it very clear that we should start restricting access to various social media sites. Please configure URL blocking and create a policy to block end user access to the sites listed below.

facebook.com
pinterest.com
imgur.com
linkedin.com
twitter.com
youtube.com

Once you have created your policy document how you implemented custom URL blocking on the firewall and proof that these sites cannot be reached. Reply with a business memo that includes screen shots of the firewall configuration Provide examples from the monitor logs showing firewall successfully blocking the traffic on the URL filtering logs on the Palo Alto.

Thank you.

IT-Director
