Subject: [B-111] Switchport Security

Implement good security practices on the LAN switch. This includes:

1.) Shutdown unused ports
2.) Lock port to the expected MAC addresses
3.) Create a VLAN filter to permit only expected IP addressing/subnets or hosts

More stringent filtering can be enable, this is simply a minimum requirement.

Reply with a memo, documenting the relevant CLI commands used to implement this.

Thank you.

IT Director
